

Training to become a Specialist for Inventory Administration with Lufthansa Technik Logistik GmbH

In order to ensure that our aircraft are always ready for take-off our maintenance and overhaul departments require a perfectly functioning material supply. As a Specialist for Inventory Administration you ensure that urgently needed aviation-technological spare parts are in the right place at the right time. This means for example that you organize, within a determined deadline, the fastest route for the onward transportation of the parts via road, air or sea or according to the customers' specifications. Our material supply scope covers aircraft parts from nuts and bolts or an engine, right on up to dangerous goods. You ensure the flow of both information and material by way of our modern IT infrastructure. You work independently with electronic and printed documentation, which is often written in English. When dealing with aircraft spare parts you must also adhere to aviation law regulations. At all times, customer orientation and quality assurance are an essential part of your work routine.

If you would like to show your full potential in an energetic team and if you enjoy providing service to a technical operation then: welcome to Lufthansa Technik Logistik Services GmbH!

Facts

- Within 3 years you will receive first class training from Lufthansa Technik Logistik GmbH, a member of Lufthansa Technik group, to become a Specialist for Inventory Administration.
